Recent Product Releases

- [Resource Manager 5.1.7 Release Notes / Control Center 1.1.8 Release Notes](#) - The RM 5.1.7 release includes fixes for modeling performance for large vSphere environments with a single datastore; it also includes support for monitoring targets (typically Linux servers) that have upgraded to OpenSSH 7.0 (1.7)+. Among the important updates in CC 1.1.8 is the capability to exclude certain directories from backups. This would typically be used by administrators to exclude application performance data from some backups.
- [Service Impact 5.1.4 Release Notes](#) - This maintenance release of Impact includes various UI and back-end fixes.
- [ZenPack Quarterly Update for Q3 2016](#) - We've published several updated ZenPacks this quarter with a huge number of fixes and enhancements. See this document for more detailed information.

News for 5.x

[Subscribe](#)[Share ▼](#)[Past Issues](#)[Translate ▼](#)

amount of storage available to Control Center, as filesystem exhaustion will often lead to data corruption and application outages. This document provides some information on the Control Center storage monitoring features introduced in Resource Manager 5.1.5, along with some storage management best practices and troubleshooting steps.

- [How to backup Zenoss 5.1+](#) - Having a valid, tested backup of your instance is immensely valuable and could save you a lot of trouble in the event of a hardware failure or other data corruption. See this article for instructions on using the "serviced backup" command to automate your backups via cron.
- [Zenoss Inspector](#) - This is a new tool we've made available to help you validate that Control Center and Zenoss RM are configured per best practices in your environment. This is a work in progress, so stay tuned over the next few months as we add new checks and capabilities.

As always, be sure to check out our Knowledge Center for additional helpful information: [Zenoss Knowledge Center](#).
